

Digital Twin Spark Ignition Engine

An ignition system generates a spark or heats an electrode to a high temperature to ignite a fuel-air mixture in spark ignition internal combustion engines, oil-fired and gas-fired boilers, rocket engines, etc.

The concept for a laser spark plug was described by Weinrotter et al., in 2005 . The solution for "noncentral ignition source" with one ignition laser on each cylinder of an engine and a pump source located apart was preferred.

Laser ignition - Spark plug development and application in ...

Ignition Solutions - Spark-ignited engines requires a spark to initiate burning of the air-fuel mixture in the combustion chamber. The spark in each cylinder is provided by a spark plug and is actually a flow of electrical current through the air and fuel vapor between the closely spaced electrodes of the spark plug.

What is a plasma spark and how does it differ from a standard ignition spark? Does the extremely bright light or Photonic energy liberated by the plasma spark actually combust fuel or is it wasted energy as opposed to a standard spark generated by an MSD box?
