

Reinforced Concrete Design Solution Manual

Reinforced concrete (RC) (also called reinforced cement concrete or RCC) is a composite material in which concrete's relatively low tensile strength and ductility are counteracted by the inclusion of reinforcement having higher tensile strength or ductility.

Concrete, usually Portland cement concrete, is a composite material composed of fine and coarse aggregate bonded together with a fluid cement (cement paste) that hardens over time—most frequently a lime-based cement binder, such as Portland cement, but sometimes with other hydraulic cements, such as a calcium aluminate cement.

Composite construction dominates the non-residential multi-storey building sector. This has been the case for over twenty years. Its success is due to the strength and stiffness that can be achieved, with minimum use of materials.

HeatBloc radiant attic barrier is formulated to be sprayed on the underside of the roof deck, rafters, ridge and gable ends. Applying a thin, even coat to these surfaces creates an effective radiant barrier that will stop 80% or more of the potential radiant energy transfer into the attic.
