Partial Derivative. Partial derivatives are defined as derivatives of a function of multiple variables when all but the variable of interest are held fixed during the differentiation.

Partial Derivative -- from Wolfram MathWorld

Suppose $f(x)$ is a function of x that is twice differentiable at a stationary point x_0 . 1. If $f''(x_0) > 0$, then f has a local minimum at x_0 . 2. If $f''(x_0) < 0$, then f has a local maximum at x_0 . The extremum test gives slightly more general conditions under which a function with $f''(x_0) = 0$ is a maximum or minimum. If $f(x,y)$ is a two ...

Calculus (from Latin calculus, literally 'small pebble', used for counting and calculations, as on an abacus) is the mathematical study of continuous change, in the same way that geometry is the study of shape and algebra is the study of generalizations of arithmetic operations.

In mathematics, an equation is a statement that asserts the equality of two expressions. The word equation and its cognates in other languages may have subtly different meanings; for example, in French an équation is defined as containing one or more variables, while in English any equality is an equation.

Equation - Wikipedia

Some scalars (such as real numbers) can be considered to have a direction, if you consider negative vs. positive scalars. Integers are used to count things, but rationals and real numbers are used for measurements.
