

Winston Introduction To Mathematical Programming

Abstract. This paper explores the implementation of a project selection tool using mathematical programming. Project selection is an essential process for portfolio management and plays an important role in accomplishing organizational goals.

A simple example. To compute the sine function of 75 degrees, 9 minutes, 50 seconds using a table of trigonometric functions such as the Bernegger table from 1619 illustrated here, one might simply round up to 75 degrees, 10 minutes and then find the 10 minute entry on the 75 degree page, shown above-right, which is 0.9666746.

"It is an important and popular fact that things are not always as what they seem. For instance, on the planet earth, man has always assumed that he was more intelligent than dolphins because he had achieved so much: the wheel, New York, wars.

The number e is a mathematical constant that is the base of the natural logarithm: the unique number whose natural logarithm is equal to one. It is approximately equal to 2.71828, and is the limit of $(1 + 1/n)^n$ as n approaches infinity, an expression that arises in the study of compound interest.

Table 1 shows that mathematical programming, including heuristics, is the most frequently utilized method, followed by probability theory and statistics, although the use of the latter is much less frequent.
